

APTUS Environmental Policy

The APTUS environmental policy is to ensure all our activities are undertaken in an environmentally responsible manner. APTUS has established policies, processes, and practices to reduce risk to the environment that align with AS/NZS ISO 14001:2016 Environmental management systems.

This will be achieved by:

- Integration of environmental policies and processes into all activities.
- Compliance with environmental legislation, standards, and contract requirements that are applicable to APTUS operations.
- Continually improve environmental performance and prevention of environmental impact considering current best practice, technological advances, current scientific understanding along with customer and community needs.
- Provision of education, training and supervision for workers and contractors to ensure environmentally responsible work practices.
- Completing environmental assessments for aspects and impacts of all activities considering the efficient use of energy and materials, sustainable use of renewable resources and the responsible disposal of waste.
- Develop, implement, and maintain emergency preparedness plans.
- Maintenance of environmental objectives and targets that are monitored through the management review process to ensure effectiveness.
